Chief Technologist

The University of Michigan Health System, Department of Pathology has a position available for a Chief Technologist to manage the Microbiology/Virology Laboratory. This position will serve as a leadership role in both scientific and administrative activities and will work closely with the Laboratory Director in both strategic and operational planning within the laboratory. A major area of responsibility will be the coordination of activities for new assay development and implementation for areas targeted in collaboration with the Laboratory Director.

Qualified candidates should possess a Bachelor's Degree in Medical Technology or a related science and certification by the ASCP or AAMT or another appropriate certifying agency. Must have previous experience in supervising and managing all areas of a clinical microbiology laboratory including: bacteriology, mycobacteriology, mycology, parasitology, virology and molecular diagnostics for infectious diseases. Knowledge of and competency with the evaluation of laboratory information systems. An advanced degree is preferred.

Interested candidates should visit www.umjobs.org and apply to posting 12523 (Administrative Manager Intermediate Healthcare).
